

ROD WEBSTER

PRINCIPAL GEOLOGIST

BSc (Applied Geology)
MAusIMM (CP)

EXPERTISE

Rod's primary areas of expertise are deposit modelling, resource estimation and due diligence reviews. He has worked in coal, base and precious metals, nickel, copper, uranium and mineral sands. His experience covers all facets of general geology focusing on deposit evaluation from the initial drilling through deposit definition, resource and reserve estimation and finally mine design.

SUMMARY OF EXPERIENCE

Rod has over 30 years experience as a Geologist working mainly in the area of resource/reserve estimation (using geostatistical and other methods), review and reconciliation. He has been involved in a number of pre-feasibility and feasibility studies developing a wide experience in all aspects of deposit development.

Since joining AMC he has been involved in a large number of resource estimates, data evaluation, resource audits and deposit reviews for a range of commodities and projects located throughout the world.

At North Limited he was involved in evaluating a wide range of deposits, and Alumbra, Antimina, El Abra, Zinkgruvan and San Cristobel. This involved initial review of all data and data collection, modelling of the deposit, resource estimation, pit design and reserve estimation leading to a financial assessment of the deposit or mine. These studies led to the purchase and development of several mines. He has experience evaluating a variety of geological environments and most styles of mineralisation.

Rod is a Member of The Australasian Institute of Mining and Metallurgy.
